# DESTINATION RESISTANCES

## Gautier Semences, your resistance ally

At the start of the season, the IBEB-EU (International Bremia Evaluation Board for the EU) recently made official 3 new races of Bremia lactucae: BI: 38EU, BI: 39EU and BI: 40EU. The races BI:16-28EU are practically no longer observed in Europe. Thus, since July 1, 2023, declarations of resistance for varieties of lettuces will only carry BI: 29-40EU.

In this context where protection against plant pathologies and their constant mutation represents a perpetual challenge, we are committed to offering you seeds adapted to current issues, while placing quality at the center of each of our approaches.

To fight concretely and effectively against the new races of Bremia recently made official, we already offer you a wide range of resistant lettuces BI:29-40EU.

In addition, resistance to Fusarium Fol:1 and Fol:4 remains a major concern, which is why our teams - scientists, pathologists, and breeders - have developed new varieties that combine a complete Bremia/Fusarium resistance pack as well as agronomic performance essential to the success of your campaign.

Because we want to be fully and sustainably involved, our breeders and our pathology teams are active members of European projects and official bodies, such as the Actifol project on Fusarium and the IBEB for Bremia.

This is a way for Gautier Semences to take an active part in global initiatives, thus sharing more than 70 years of research, innovation and know-how, while remaining at the forefront of current events.
