OUTDOOR
LETTUCE

Double defense, zero compromise

OUTDOOR LETTUCE

Easily identify varieties that combine Bremia Bl:29-41EU and Fusarium Fol:1 and/or Fol:4 resistances thanks to the two pictograms mentioned above: INNOVATION BREMIA and FUZ CONTROL®

LMV: a new designation, unchanged resistance

Starting this season, the resistance previously designated as LMV:1 will now be referred to as LMV:2, in line with the international harmonisation of nomenclature led by the seed industry.

This change only affects the resistance designation: the genetics of the varieties, their resistance levels and their field performance remain strictly unchanged. During the transition period, the LMV:1 and LMV:2 designations can therefore be considered equivalent.

Growing performance, sustainably

As growing conditions become increasingly demanding, our ambition remains unchanged: to offer growers high-performing, reliable varieties adapted to real-world growing conditions.

The 2026/2027 season marks another milestone in the renewal of our Fuz-control® range, with five new varieties being commercially launched: **GOKOU J2240**, **GORIKA J2234**, **CHAMBORY C3130**, **KENOBI E2243** and **CANTOR R3136**.

Developed through our breeding programmes, these new varieties further strengthen our range, providing growers with new solutions to secure their crops and meet market expectations.

With Fuz-control®, we continue to pursue the same ambition: advancing genetics to deliver practical solutions, both today and tomorrow.

Our commitment also extends to organic farming. For many years, our teams have been working to develop varieties suited to this production method, with the aim of supporting all growers in achieving productive and sustainable cropping systems.

We invite you to explore our updated open-field lettuce range in this new brochure and discover the latest varieties that will support you throughout the coming season.
